SECTION WISE COMPARISON OF PRICE

INSIGHTS

- 1) Most of the revenue is generated from medium price range products, indicating that mid-priced items drive the business.***
- 2) There is a negative relationship between price and sales volume, where higher-priced products tend to sell fewer units.***
- 3) The majority of products fall under the medium price category, showing a balanced pricing strategy***
- 4) Average price comparison shows that [Women/Men] products are slightly more expensive, indicating a premium positioning.***

INSIGHTS

- 5) Discounts are mainly applied to lower priced items to attract act more buyers***
- 6) Promotional products generate significantly higher sales volume (1412) than non-promotion ones(872) promotions clearly boost customers purchasing behavior and demand.***
- 7) Mid-price range products show the highest sales volume under discounts. Discounts impact reduces slightly at higher price ranges indicating price sensitivity.***
- 8) Seasonal products with discount contribute to over approx 60% of sales, showing strong demands. Non-seasonal items still maintain steady sales but benefit less from discounts.***
- 9) Women's section generates significantly higher revenue than men's section Discount percentage is higher in men's section. Discount percentage is higher in men's section but it dos not translate into equal revenue growth.***
- 10) Products with discounts consistently achieve higher sales more than (1400) across position respectively. product placement has less impact compared to discount strategy on sales performance.***
